

## FOUR POST CARGOVATOR FOR TURBINE ASSEMBLY

## SPECIALTY SOLUTION #37

## ENERGY

- 15,000 lb. capacity, mechanical actuation, 228" x 228", 190" vertical travel
- Combines work platform and moving mezzanine
- Electro-mechanical drive with machine screw actuators
- 100% level lifting

Handling Specialty's experience in transformer assembly was adopted by ASEA Brown Boveri's American and Canadian plants for their electrical transformers.

One of the steps in the assembly of large transformers is the winding of wire around the central coil. Coil winding is done vertically. A moving work platform allows employees to position themselves at various heights as the transformer is vertically built up with coil. The unique design of Handling Specialty's Cargovator is suited ideally to this task.
